

KW RANGE

NEW PRODUCT 2016

Compact fireboxes range allowing airtight and regulated combustion.

KW1000

KW1000 Compact fireboxes range all o

- 1**
Door guidance on a double sprocket: ease of manipulation, long-term security, better balancing of the door.
- 2**
Smokes exit of 200mm Ø without damper, offering wider installation possibilities: renovation and new project.
- 3**
Door wrapping: ensures the protection of the door during transport and installation.
- 4**
3 fireboxes sizes: 900-1100-1300, very wide vision of the fire with a silk-screen printed glass.
- 5**
Double combustion on the whole range, allowing optimized performances of the appliances. Refractory bricks inside, guaranteed during 10 years. Use of big slabs, aesthetic and modern.
- 6**
Very compact (less deep). Advantage: the fireplace takes less space in the room.
- 7**
Primary and secondary air regulation system. Easy to use, only one control to adjust your combustion speed (very noticeable). Reduced wood consumption.
- 8**
Perfect stability of the appliance, thanks to adjustable feet. Possibility to increase the height: up to 40 cm.

9

The chimney throat is equipped with a double tailpipe: increase of the heat exchange area.

10

Wide door opening, handling with a glove (supplied with the firebox).

11

Curved guidance rail allowing a perfect airtightness of the door. Very qualitative feeling when you close it.

12

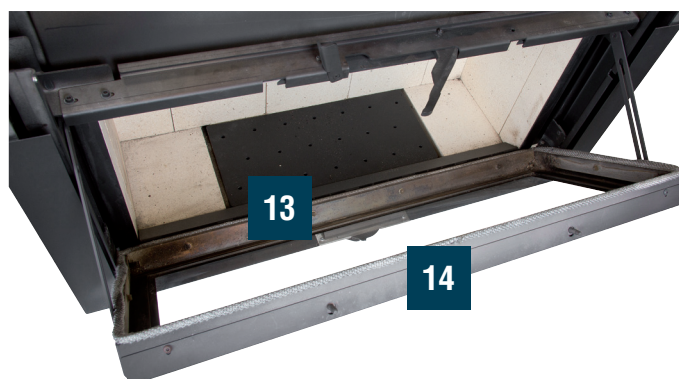

Double guide of the door, allowing a better balance. Caster on both sides of the guidance and taut chain for a door lifting without vibration.

13

New : tertiary air diffusion (air wash) from the bottom, ensuring a good sweeping of the "cold" areas of the glass (low part).

14

Tilt and turn door, very convenient system to clean the glass.

KW1000

15 / 16

Outside air connection behind or below (Ø125mm), ensuring a closed circuit working and thus an airtight appliance, adapted to low energy buildings. Increased performance for the combustion quality as much as for energetic performance of the house.
